can also set up MySQL authentication parameters. Extra tools to play with You can make use of an additional set of features for opening the localhost page via your default web browser, opening the folder where the utility is stored, working with an XDebug client, accessing PHP information, and enabling an SQLite database browser. General configuration settings You are given the freedom to automatically start the servers upon launching UwAmp, detect Apache and MySQL running from another package, check if the port is used, get public IP addresses, configure an external text editor, as well as automatically restart serves when the configuration files are changed. Introduction PHP is a widely used application programming language that enables you to construct Web applications without requiring any programming expertise. As you may know, PHP is used in a wide range of applications, both at an online and offline level. PHP web apps are usually seen on sites such as Twitter, Facebook, eBay, and Google. The world also runs Microsoft Office applications using PHP.

---

You can find PHP running on sites such as Craigslist, the BBC website, WordPress, and Yahoo Mail. The problem with PHP is that it's a scripting language that requires special skills to work properly. This results in a huge number of website developers out there without any special programming skills, which could lead to many problems. Luckily for you, we have released a tool that helps you out with managing and running Apache and MySQL servers directly from its interface using a set of straightforward features. Aim UwA
